Ceramic sanding belt – The new generation

High sanding abrasion, long lifetime, low heat generation – are the features of the new ceramic sanding belt for an economic woodworking. Coated with high performance graining the sanding belts especially qualifies for rough- and medium sanding of hard types of woods.

The new sanding belt generation has sharper sanding edges due to the steadily self-sharpening graining highest abrasion is achieved, long life time and thereby an economical sanding. Because of an exclusive use of polyester strengthened material in the base a higher balance during sanding is enabled. In addition the temperature caused by friction during the sanding process is reduced. Consequently the sanding belt is more aggressive and a faster sanding dust removal is possible, this is saving time especially on larger areas.

Ceramic sanding belts

Art.-No.: 17007
Price grit size 36: 10,85 € each
Price grit size 50: 9,33 € each

- + Steadily self-sharpening
- + High abrasion
- + Longer lifetime
- + Faster work
- + Suitable for all conventional belt sanding machines

Conclusion: The ceramic sanding belt ensures a considerably increased performance especially during rough- and medium sanding of hard types of wood.
