WAKOL D 3318 MultiFlex, fibre-containing – the universal adhesive against indentations

Dispersion-based wet-bed adhesive

- For laying LVT flooring, homogeneous and heterogeneous PVC flooring, CV flooring, linoleum and caoutchouc
- Fibre-containing
- Very low in emissions EMICODE EC1 PLUS

Safety through fibre technology

Special fibres in the adhesive guarantee an exceptionally even application of the adhesive even with a standard serration. A special trowel notch size is not required.. The results are low consumption and defined airing times over the entire area.

At the same time, the special fibres prevent indentation of the adhesive bed from walking and kneeling on the freshly laid flooring during laying as well as deformations in the hardened adhesive bed caused by heavy point loads during use. The result is safety for lastingly beautiful surfaces.

One product for all elastic flooring

Universally applicable for PVC and CV flooring, in particular for LVT flooring as well as for quartz-vinyl tiles, caoutchouc flooring and linoleum. The extraordinary range of applications noticeably reduces storage costs, economises and reduces the risk of mix-ups.

Comfortable and economic usage

WAKOL D 3318 MultiFlex, fibre-containing stands for comfortable usage. The adhesive is applied with the usual trowel notch sizes, is extremely easy to apply and the fibre technology yields an exceptionally even application of the adhesive. WAKOL D 3318 MultiFlex, fibre-containing builds up high strength and a pronounced thread pattern within a short time. The high suction adhesion moreover prevents undesirable slipping of the flooring, especially important in design flooring.

WAKOL D 3318 MultiFlex, fibre-containing offers great economy through very low consumption and comfortable, time-saving usage.
